## DETAILED ACTION

### *Drawings*

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Cloud et al.

Cloud (Figures 1-9) shows an apparatus A in the form of a cylindrically shaped joint box having a plurality of optical fiber splices (not numbered) in a plurality of splice trays 91 stacked together and held in place in a plurality of arcuate-shaped storage channels formed between the housing members 12, 14 and a support assembly 11. Both housing members 12 and 14 have inwardly facing concave surfaces. Cloud further discloses that the trays could have a variety of configurations. Making the trays with arcuate-surfaces would provide a plurality of radially spaced channels, each having a convex surface and a concave surface. The apparatus (the joint box) has a center shelf 63, which holds the retainers (storage trays 69 or brackets 109), divides the box into two compartments. The plurality of splices and the joint box forms an optical fiber network. The trays 69 have center steps 80 and end steps 76 wherein the end steps extend the entire length of the tray. The trays 69 and 91 are removably attached to the shelf 63.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cloud et al.

Cloud shows all the features of these claims as described in Paragraph 3 above except the center steps running the entire length of the trays. The instant invention does not provide any reasons or specific problem to be solved by this feature. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to extend the center steps to the entire length of the trays because this would require a mere change in size, which involves only routine skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955).
